Healthy&Natural

What it is?

Allergobiota is a food supplement meant to provide a balanced and effective response to allergies, i.e. a condition of excessive response by the immune system when comes into contact with a substance called "allergen".

An innovative Formula

QUERCETIN: is one of the most important bioflavonoids, active ingredients with antioxidant action that protect cells from the harmful action of free radicals. In addition Quercetol acts by stabilizing the walls of cells that release histamine, the main cause of allergic reactions, with an antihistaminic action. Finally, the anti-allergic action of Quercetin is linked to its action on the recruitment of leukocytes and on the regulation of the balance between Th1 / Th2 lymphocytes.

PROBIOTICS: according to FAO and WHO, they are "live micro-organisms which, when administered in adequate quantities, bring a benefit to the health of the host". 70% of the bacteria present in and on our body live in the gastrointestinal tract where, moreover, an important part of our immune system resides. Moreover, this explains the direct relationship between a situation of balance, intestinal eubiosis and an excellent response of the immune system. Early contact with probiotic bacteria can help the body not develop allergic hypersensitivity. In a study it was possible to observe that in the group of people who had taken probiotics, even in the period of intense allergic reaction, the level of IgE was lower, i.e. IgE are those antibodies that highlight the presence and extent of allergic manifestations – while the level of IgG antibodies, endowed with a protective function, was higher. Probiotics have an antagonistic action against pathogenic bacteria, improve intestinal health, reduce the level of blood cholesterol, assist in anti-tumor therapy and do enhance the efficiency of the immune system. The anti-allergic action of QUERCETIN is supported by the combination with the immune-modulating action of Probiotics.

ZINC AND NIACINE: the formula also includes ZINC and NIACIN (Vit. B3) which play a central role in the maturation and differentiation of immune cells, promoting the development of lymphocytes and the production of antibodies.

To whom it is recommended

ALLERGOBIOTA is a valuable aid against the annoying symptoms of allergies, from those affecting the respiratory tract to those of the skin.
