

vifraKron[®]

slow release technology

What it is?

This antacid is a supplement for the treatment of excessive gastric acidity, associated with burnings and post-prandial gastroesophageal reflux. Thanks to the synergistic action of the individual components, it has a quick effect.

An innovative Formula

Vitamin C is salified with minerals such as sodium thus creating salts as sodium ascorbate. Sodium bicarbonate neutralizes the acidity of gastric juices by producing carbon dioxide, thus promoting digestive functions and counteracting acidity and burnings. Citric acid acts as an antacid and detoxifier, buffering gastric hyperacidity. Zinc enhances the production of mucins which are substances which, like a sort of film, protect the stomach. The product is a solution that resists the pH variation through moderate additions of acids or bases.

To whom it is recommended

This formula is indicated for acidity problems associated with burnings and gastroesophageal reflux. The formulation is indicated to counteract the symptoms linked to gastric hyperacidity.
