Healthy&Natural

What it is?

IBS Triptobiotic is a food supplement with an innovative formulation designed to provide a balanced and effective response to irritable-bowel syndrome (IBS); thanks to the combination of L-Tryptophan and Lactobacillus Reuteri, it is able to stimulate both the endogenous and the probiotic part.

An innovative Formula

TRYPTOPHANE: an amino acid essential for the human body which allows the synthesis of hormones and vitamins such as serotonin, melatonin and niacin co-factors of important biological functions such as mood and sleep.

LACTOBACILLUS REUTERI: a probiotic able to metabolize tryptophan (Trp) into indole derivatives, including indole-3-lactic acid, which is responsible for the intestinal immune response by activating the aryl-hydrocarbon receptor (AhR), which in turn stimulates factors-that regulate intestinal immunity and inflammation. These two powerful ingredients together contribute to the prevention and improvement of irritable- bowel syndrome (IBS) by activating the physiological mechanisms of tissue repair, with a significant improvement in symptomatology.

ZINC AND PASSIFLORA: two powerful nutraceuticals that together enhance the action of extinguishing inflammation of the intestinal tissue thus improving patient quality of life.

To whom it is recommended

IBS TRIPTOBIOTIC is indicated for the treatment of irritable- bowel syndrome (IBS), a common condition that affects the digestive system (it affects 15% of the Italian population with a 4: 1 woman-man ratio). Effective in preventing and reducing symptoms of IBS such as stomach cramps, bloating, diarrhea and constipation, which appear and disappear over time and last days, weeks or months long.

Immunity
