What it is?

Memomint is a food supplement that provides valuable support to memory and cognitive functions. It represents a valid solution in case of difficulty in concentration, cognitive deficits and slowing down in learning.

An innovative Formula

NEUMENTIX is a natural ingredient derived from special types of spearmint plants. These plant varieties are rich in polyphenols, such as rosmarinic acid and salvianolic acid, believed to underlie the ability of Neumentix™ to promote cognitive well-being. Polyphenols are powerful plant substances that have numerous health benefits. They act as antioxidants protecting the body and neutralizing free radicals that damage cells.

Preclinical studies indicate that rosmarinic acid not only reduces the oxidative stress that causes cell damage, but may help protect those cells already present in the brain. It is also believed to help nerve cells transmit signals more quickly, thus contributing to a more efficient functioning of the brain. Clinical trials confirm that the polyphenols in Neumentix™ naturally support adult psychological function and cognition, which is important for brain health.

It aims to improve cognitive and mental performance by promoting attention, concentration, reaction times and working memory, without disturbing sleep. Studies show benefits in healthy young adults and older adults with age-related memory impairment.

B GROUP VITAMINS have the task of transforming the food we eat into energy. That's why they are often recommended to combat tiredness, not only physical, but also mental. In fact, energies are not only necessary to carry out all the activities for which our body requires them but they are also needed for all cognitive functions.

ZINC helps to turn off the inflammation process, helping to improve the patient's cognitive condition.

COCOA In the brain, cocoa produces an increase in blood circulation, stimulates the formation of new vessels (angiogenesis) and carries out a protective action against the neurons located in the brain regions involved in learning and memory.

To whom it is recommended

This food supplement is recommended for those who wants to improve cognitive and mental performance by promoting attention, concentration, reaction times and working memory, without affecting their sleep. It represents a valid support to cognitive functions during the season changes.
