

vifraIntegra®

Healthy & Natural

What it is?

UROGENITAL is a food supplement to preserve the health of the urinary tract. This supplement helps the urinary tract, from the kidneys to the urethral meatus, which are resistant to bacterial colonization, despite the frequent contamination of the distal urethra by those bacteria, present in the intestinal tract. Symptoms may be absent or include pollakiuria, urgency, dysuria, lower abdominal pain and flank pain. In case of kidney infection, systemic symptoms and even sepsis may occur.

An innovative Formula

CRANBERRIES research has linked the nutrients present in cranberries to a lower risk of urinary tract infections (UTIs), to the prevention of some cancers, improvement of immune function and decrease of blood pressure. The high level of antioxidant proanthocyanidins (PACs) in cranberries may help prevent adhesion of some bacteria to the walls of the urinary tract. In this way, the PACs in cranberries can help prevent urinary infections.

BROMELAIN is a complex mixture of proteases extracted from the fruit or from the stem of pineapple. Bromelain combined with antibiotic therapies has shown to be more effective than antibiotics alone in pneumonia, bronchitis, staphylococcal skin infection, thrombophlebitis, cellulitis, pyelonephritis and in perirectal and rectal abscesses, sinusitis and urinary tract infections.

D-MANNOSE is a simple sugar capable of inhibiting the adhesion to the urethral and bladder epithelium of the bacteria responsible for urinary tract infections, helping their elimination through the urine, so reducing the onset of infections. D-mannose can be used in acute urinary tract infections and relapses.

VITAMIN C plays a vital role in fighting urinary tract infections. Not only does it stimulate the production of interferon in the immune system but it also makes urines very acidic. The association between Cranberry and Vitamin C has proved to be extremely effective in fighting cystitis, and the presence in the formulation of Bromelain significantly amplifies the effect of proanthocyanidins present in the Cranberry.

To whom it is recommended

UROGENITAL is suitable for those who want to prevent urinary tract infections, 95% of which occur when bacteria travel from the urethra to the bladder and, in the case of pyelonephritis, from the ureter to the kidney.
